OVERVIEW

India's packaging industry is entering a high-growth phase, driven by expanding food and beverage processing, FMCG, pharmaceuticals, organised retail, e-commerce, quick commerce and modern manufacturing.

The industry is projected to grow at around 9% CAGR, reaching approximately US\$92 billion by FY2030. Packaging demand is being fuelled by rising consumption, urbanisation and the growing need for convenience, product safety, extended shelf life and efficient logistics.

Packaging volumes are estimated to rise from 439.9 billion units in 2025 to 570.2 billion units by 2030, creating significant opportunities for packaging machinery, materials, converting, printing, labelling, coding, automation and sustainable solutions.

THE FUTURE OF PACKAGING

Packaging is evolving beyond product protection into an integrated solution focused on Product safety and extended shelf life, Convenience and functionality, Brand differentiation, Supply-chain efficiency, Traceability and authentication, Automation and productivity, Sustainability and recyclability and E-commerce and last-mile delivery

KEY GROWTH OPPORTUNITIES

Food & Beverage: Rising consumption of processed foods, snacks, dairy, beverages, frozen foods, sauces and ready-to-eat products is driving demand for filling, pouch packing, form-fill-seal, bottling, canning, wrapping, retort, labelling, coding and high-barrier packaging technologies.

FMCG & Consumer Products: Multiple SKUs, smaller pack sizes and frequent product changes are increasing demand for flexible, high-speed and efficient packaging systems.

E-Commerce & Quick Commerce: The rapid growth of online retail is creating demand for lightweight, durable, tamper-resistant and logistics-efficient packaging.

Flexible Packaging: Flexible packaging remains a major growth segment, with India's flexible plastic packaging market forecast to grow from approximately US\$31.9 billion in 2026 to US\$44.1 billion by 2031.

Sustainable Packaging: Growing regulatory, consumer and industry focus is accelerating demand for recyclable, lightweight, resource-

efficient and circular packaging solutions.

Automation & Smart Packaging: Packaging production is moving towards automation, robotics, digitalisation, data-driven operations and smart manufacturing to improve productivity, flexibility and traceability.

Printing, Labelling & Coding: Increasing SKUs, private labels and regulatory requirements are creating demand for advanced printing, labelling, coding and identification technologies.
